

# Step 1: Create Apex Class

Go to:

Setup → Apex Classes → New

Class Name:

EmailController

Paste this code:

```
public class EmailController {

    public String toEmail {get; set;}
    public String subject {get; set;}
    public String bodyText {get; set;}

    // File Variables
    public Blob uploadedFileBody {get; set;}
    public String uploadedFileName {get; set;}

    // Send Mail
    public PageReference sendMail() {

        // Email Validation
        Pattern pattern = Pattern.compile(
            '^[A-Za-z0-9+_.-]+@[A-Za-z0-9.-]+$'
        );

        Matcher matcher = pattern.matcher(toEmail);

        if(!matcher.matches()) {

            ApexPages.addMessage(

                new ApexPages.Message(

                    ApexPages.Severity.ERROR,
                    'Invalid Email ID'
                )
            );

            return null;
        }
    }
}
```

```

// Create Email
Messaging.SingleEmailMessage mail =
    new Messaging.SingleEmailMessage();

// Recipient
mail.setToAddresses(
    new String[] {toEmail}
);

// Subject
mail.setSubject(subject);

// Body
mail.setPlainTextBody(bodyText);

// Attachment
if(uploadedFileBody != null) {

    Messaging.EmailFileAttachment attachment =
        new Messaging.EmailFileAttachment();

    attachment.setFileName(uploadedFileName);

    attachment.setBody(uploadedFileBody);

    mail.setFileAttachments(

        new Messaging.EmailFileAttachment[] {
            attachment
        }
    );
}

// Send Email
Messaging.sendEmail(

    new Messaging.SingleEmailMessage[] {mail}
);

ApexPages.addMessage(

    new ApexPages.Message(

        ApexPages.Severity.CONFIRM,
        'Email Sent Successfully'
    )
);

```

```
        return null;
    }
}
```

Save.

---

## Step 2: Create Visualforce Page

Go to:

Setup → Visualforce Pages → New

Page Name:

EmailPage

Paste:

```
<apex:page
    controller="EmailController"
    showHeader="true"
    sidebar="true">

    <apex:form enctype="multipart/form-data">

        <apex:pageBlock title="Send Email">

            <apex:pageMessages/>

            <apex:pageBlockSection columns="1">

                <!-- Email -->
                <apex:inputText
                    value="{!toEmail}"
                    label="Recipient Email"/>

                <!-- Subject -->
                <apex:inputText
                    value="{!subject}"
                    label="Subject"/>

                <!-- Body -->
                <apex:inputTextarea
                    value="{!bodyText}"
```

```
        label="Message Body"/>

        <!-- File Upload -->
        <apex:inputFile
            value="{!uploadedFileBody}"
            filename="{!uploadedFileName}"/>

    </apex:pageBlockSection>

    <!-- Button -->
    <apex:commandButton
        value="Send Email"
        action="{!sendMail}"/>

</apex:pageBlock>

</apex:form>

</apex:page>
```

Save.

---

## Step 3: Run Visualforce Page

Click:

Preview

OR open:

/apex/EmailPage

---

## How It Works

### Valid Email

Example:

abc@gmail.com

Output:

- Email sent successfully
  - Success message shown
- 

## Invalid Email

Example:

abcm@gmail.com

Output:

- Email not sent
- Error message:

Invalid Email ID

shown on frontend.
